

POLICY DOCUMENT	
Product Safety & Quality Management Policy	

Plasmotec are specialist in standard and custom plastic injection moulded products. We are committed to bringing every project to a successful conclusion, from the drawing board through prototyping to full production of injection-moulded components. From the straightforward to the highly complex, we are expert in moulding most thermoplastic material and our capabilities are evolving all the time. We serve a broad range of industries, such as food and beverage packaging, health and beauty products.

At Plasmotec we are united in our commitment to producing safe, legal and quality products that satisfy the needs and expectations of our customers.

To achieve this, we endeavour to:

- Meet and exceed needs and expectations of our customers
- Provide the appropriate leadership to continually improve our Quality Management System
- Ensure the involvement of our people
- Manage our activities and related resources as a process
- Take a systematic, risk-based approach to determine the type and scope of controls used
- Achieve continual improvement by identifying measurable key performance indicators and using the 'plan, do, check, act cycle' to address them
- Take a factual approach to decision making
- Build strong and sustainable relationships with suppliers and sub-contractors to ensure our products are manufactured and delivered to the highest safety, legal and quality standards
- At regular intervals, senior management shall review each aspect of our Quality Management System and revise it as is required
- Continuously improve the site's product safety and quality culture.

Our Product Safety & Quality Management System complies with the requirements of ISO 9001:2015, BRCGS Packaging Materials 7th ed. and our statutory and regulatory requirements. It has been designed to encourage and enhance customer focus, customer satisfaction, continuous improvement and excellence throughout the business.

Our Product Safety & Quality Management Policy is communicated throughout Plasmotec. It is also available for interested parties, on request.

Paul Keeney
